DORA is the institutional repository and bibliography for any publication authored, edited or published by Eawag, Empa, PSI or WSL or resulting from research performed at PSI research facilities. Each research institute has a separate institutional DORA repository. DORA acts simultaneously as: (a) bibliography (DORA is a source for publication lists on the institutional websites and for academic reports); (b) archive (DORA preserves the full texts of the institutes' publications); (c) Open Access (OA) repository (researchers are able to make a full-text version of their scientific articles freely available in DORA).

Registering Publications

Import As a service, Lib4RI collects relevant items from external databases and enriches them with internal information. Once a publication is registered, authors are notified by e-mail and are kindly asked to provide feedback about the publication.

Submission If a publication is not available in DORA, authors can submit the publication through an online form. Publications can be submitted as soon as they have been accepted and are online available. All publications in DORA are shared with the public in accordance with copyright law.
The simple search is available on the top right of every DORA page.

DORA Features

The simple search is available on the top right of every DORA page.

With the advanced search, search in a combination of specific fields, choose an organisational unit or search for full texts.

Narrow down your search with as many search criteria as you like. Click this symbol to add lines. You can choose between the Boolean operators «AND», «OR» and «NOT».

Filter your search results. After searching or browsing, choose from several filter options on the left. By selecting a filter option (e.g. authors), this filter will be added to your search. By choosing more options, you can narrow down your search to more specific results.

To exclude or remove a filter, simply click on the minus in front of the filter option.

Only a closed access published version available? Please submit the accepted version to DORA! For more information on the benefits of submitting your accepted version to DORA please read our OA Lib4RI page.

Go to the DORA help page. There, you will find a wealth of information on DORA.

For DORA PSI, you can get a division or department publication list by clicking «PSI Laboratories». Simply click on the department or division name to get the publication list you need.

For DORA Eawag, Empa and WSL, the easiest way to get a department publication list is by clicking on the DORA Logo (it will direct you to the starting page) or using the advanced search. Simply select the organisational unit you need.

Export your publication list as an Excel or CSV file. Simply click the respective symbol. The Excel and CSV files include metadata, such as authors, title, OA information, DOI etc.

For DORA PSI, you can get a division or department publication list by clicking «PSI Laboratories». Simply click on the department or division name to get the publication list you need.

Export your publication list as a PDF, RTF or RIS file. Four standard citation styles are available: ACS, APA, IEEE and Vancouver. Alternatively, you can choose the PSI and Eawag institutional citation styles.

Create an author publication list. To search for an author, either use the alphabetic browsing tool or type the person’s name. To get a full list of publications from a single specific author, simply click on the person’s name.

It is possible to record more than one version of an author’s name in DORA. For example, if an author changes their name due to marriage, all publications will still be linked to the same author.

Submit a publication to DORA. You can submit your publication as soon as it has been accepted and is online available. If the publisher has imposed an embargo, it will be available exclusively on the intranet until the embargo is lifted. Click «Add Publication» to access the submission form.

If you are not sure whether your document can be submitted to DORA (e.g. one-page publications, video formats, etc.), please read the DORA Content Policy on the submission form page. Please note that DORA does not record publications that are not directly related to the four research institutes within the ETH Domain (e.g. from your work at previous employers).
There are three main versions of a publication:

**Submitted Version**
A submitted version («preprint») is an original manuscript submitted to a journal and considered for publication. It does not include revisions made during peer-review, copy-editing or formatting done by the publisher. DORA does not accept submitted versions, but many preprint servers do (e.g. arXiv, bioRxiv).

**Accepted Version**
An accepted version («postprint») is a final manuscript accepted for publication by a publisher. It includes all revisions made during peer-review, but does not include copy-editing or formatting done by the publisher. Authors are encouraged to submit accepted versions to DORA as most journals allow accepted versions to be made OA in an institutional repository (sometimes after an embargo). Please note that proofs and offprints sent to the author from the publisher are not accepted versions.

**Published Version**
A published version is a final version of an article produced by a publisher with a journal’s typeset and branding. As OA journals are increasing, the number of OA published versions is also rising. In some cases, even subscription journals allow published versions to be made OA. For more information on OA go to Lib4RI.
